Summary

Software Engineer with strong foundations in **Object-Oriented Programming, database design, and full-stack application development**. Proficient in **.NET, Java, HTML5, CSS3, and SQL**, with hands-on experience delivering production-ready enterprise applications. Adept at applying **OOP principles** — encapsulation, inheritance, polymorphism, and abstraction — to build scalable, maintainable software. Additional experience developing **cross-platform mobile applications** using Flutter for Android and iOS. Passionate about state-of-the-art software development and eager to contribute to high-quality engineering teams.

Skills

- **Languages:** C#, Java, Python, JavaScript, Dart (Flutter)
- **Frameworks & Platforms:** ASP.NET Core (.NET Framework / .NET Core), Flutter (Android & iOS)
- **OOP & Design:** Object-Oriented Programming, SOLID Principles, Design Patterns, Clean Architecture
- **Frontend:** HTML5, CSS3, JavaScript, jQuery, ReactJS
- **Backend & APIs:** ASP.NET Core, REST APIs, Microservices Architecture, Web Services
- **Databases:** SQL Server (queries, stored procedures, schema design), MySQL, Firebase/Firestore
- **Cloud & DevOps:** Microsoft Azure (Function Apps, Entra ID, API Management)
- **Tools:** Visual Studio, VS Code, Android Studio, Git/GitHub, Postman
- **Methodologies:** Agile/Scrum, Code Reviews, Technical Documentation

Education

BS Software Engineering (2022 – 2026)

Bahria University, Karachi

Experience

Software Engineer (Full Stack & Cloud)

Digisoft (NASTP)

10/2025 – Present

- Developing enterprise web applications in **C# and ASP.NET Core**, applying **OOP principles** and clean architecture patterns throughout the codebase.
- Designing relational **database schemas**, writing optimized SQL queries and stored procedures in **SQL Server** to support complex business logic.
- Building and consuming **RESTful APIs** with clearly defined contracts, following best practices for versioning, error handling, and security.
- Developing responsive frontend interfaces using **HTML5, CSS3, and JavaScript**, integrated with backend APIs.
- Integrating **Microsoft Azure** services including Function Apps, API Management, and Entra ID for scalable, cloud-native deployments.

- Participating in **code reviews**, collaborating with senior developers and QA engineers, and maintaining thorough technical documentation.

Software Engineering Intern

Trust Nexus

06/2025 – 09/2025

- Developed **Flutter mobile application** features for Android, implementing clean UI components and integrating REST APIs for real-time data.
- Applied **OOP design principles** in Dart to structure reusable, maintainable mobile application modules.
- Assisted in **troubleshooting and debugging** across both mobile and backend layers, resolving defects within Agile sprint cycles.
- Collaborated in an **Agile/Scrum** environment, contributing to sprint planning, stand-ups, and retrospectives.

Projects

Rainmaker HRMS System – Full Stack (ASP.NET Core, SQL Server, Flutter)

Designed a scalable multi-company HRMS with modules for biometric attendance, payroll, leave management, and project tracking. Applied **OOP principles and clean architecture** in **ASP.NET Core** for the backend, designed normalized **SQL Server** schemas with stored procedures, and built a **Flutter mobile app** for Android enabling on-the-go employee access.

MyTrueAttorney – Full Stack (.NET, ReactJS, Azure Cloud)

Built a smart visa recommendation platform using **ASP.NET Core** REST APIs backed by **Azure** cloud services and a **ReactJS** frontend. Implemented responsive **HTML5/CSS3** UI components and cloud-based decision logic to automate visa suggestions based on user profiles.

Driving License System (DLS) – Full Stack Web Application

Developed a digital licensing system with application processing, CNIC verification, appointment scheduling, and status tracking. Structured the **C# backend** using **OOP design patterns**, used **SQL Server** for data persistence, and built the frontend with **HTML5, CSS3, and JavaScript**.

Bus Schedule Management System – Java & Microservices

Implemented a schedule management platform using **Java** and **ASP.NET Core** microservices with an API Gateway. Designed **SQL Server** database schemas, applied **OOP principles** for modular service design, and wrote stored procedures for schedule and route data management.

Achievements

- Consistently applied **OOP principles** — encapsulation, inheritance, polymorphism — and **SOLID** design across enterprise .NET and Java projects, improving code reusability and maintainability.
- Designed and optimized **SQL Server** database schemas and stored procedures, reducing query execution time and supporting complex reporting requirements.
- Delivered **cross-platform Flutter mobile applications** for Android with smooth UI performance and seamless REST API integration.
- Built full-stack web applications end to end — covering **HTML5/CSS3 frontend**, **.NET backend**, and **database** layers — independently and within team settings.

- Integrated **Azure Entra ID** for secure, enterprise-grade authentication across multiple application modules.
- Delivered production-ready features consistently under tight deadlines in **Agile/Scrum** environments.
- Maintained high code quality through **code reviews, documentation, and adherence to coding standards** across all projects.
