Summary

Software Developer with **3+ years of professional experience** owning the full software development lifecycle — from requirements gathering and architecture through deployment and optimization. Proficient in **C#, Java, JavaScript, and Python**, with strong hands-on experience in **React, ASP.NET Core, REST APIs, and cloud platforms (Azure)**. Skilled at integrating third-party services, optimizing application performance, and maintaining clear technical documentation. Comfortable working in fast-paced, fully **remote and collaborative environments** alongside product, design, and QA teams.

Skills

- **Languages:** C#, Java, JavaScript, Python, Dart (Flutter)
- **Frameworks & Platforms:** ASP.NET Core (.NET Framework / .NET Core), ReactJS, Node.js
- **Frontend:** HTML5, CSS3, JavaScript, jQuery, ReactJS
- **Backend & APIs:** ASP.NET Core, REST APIs, Third-Party API Integration, Microservices, Web Services
- **Databases:** SQL Server, MySQL (Relational); Firebase/Firestore, MongoDB (NoSQL)
- **Cloud & DevOps:** Microsoft Azure (Function Apps, Entra ID, API Management), CI/CD Pipelines, Git/GitHub
- **Tools:** Visual Studio, VS Code, Postman, Android Studio
- **Methodologies:** Agile/Scrum, Code Reviews, API Documentation, Technical Specifications

Education

BS Software Engineering (2022 – 2026)

Bahria University, Karachi

Experience

Software Developer (Full Stack & Cloud)

Digisoft (NASTP)

06/2023 – Present

- Own the **full software development lifecycle** for enterprise modules — from requirement analysis and design through implementation, testing, and deployment.
- Write clean, scalable **C# and ASP.NET Core** code adhering to SOLID principles, coding standards, and maintainability best practices.
- Design and optimize **relational database schemas** in SQL Server; write complex queries and stored procedures to support high-performance business logic.
- Build and integrate **RESTful APIs** connecting applications with external services and third-party platforms; maintain clear API specifications and documentation.
- Develop responsive **HTML5/CSS3/JavaScript** frontends and **ReactJS** dashboards consumed by API-driven backends.

- Integrate **Microsoft Azure** services — Function Apps, API Management, and Entra ID — for secure, scalable cloud deployments.
- Debug and resolve **complex systemic issues** across the stack, applying root-cause analysis to minimize recurrence.
- Conduct **code reviews**, providing structured feedback to junior developers to uphold team quality standards.
- Collaborate closely with product managers, designers, and QA engineers in an **Agile/Scrum** environment to define and ship new features.

Software Engineering Intern

Trust Nexus

01/2023 – 05/2023

- Developed and maintained full-stack application features integrating **REST APIs** and **NoSQL (Firebase/Firestore)** as the data layer.
- Optimized **frontend performance** and improved UI/UX responsiveness using HTML5, CSS3, and JavaScript.
- Assisted in **debugging and root-cause analysis** of application issues across web and mobile layers.
- Contributed to **technical documentation**, code comments, and API specifications for implemented features.
- Worked in an **Agile/Scrum** environment across sprint planning, daily stand-ups, and retrospectives.

Projects

Rainmaker HRMS System – Full Stack (ASP.NET Core, SQL Server, ReactJS)

Designed and delivered a scalable multi-company HRMS covering biometric attendance, payroll, leave management, and project tracking. Owned the full SDLC: designed normalized **SQL Server** schemas, built **ASP.NET Core** RESTful APIs, integrated **third-party services**, and developed interactive **ReactJS** dashboards. Applied CI/CD practices for deployment pipelines.

MyTrueAttorney – Full Stack (.NET, ReactJS, Azure Cloud)

Built a smart visa recommendation platform with an **ASP.NET Core** backend deployed on **Microsoft Azure** and a **ReactJS** frontend. Integrated Azure cloud services for scalable backend logic, implemented secure **REST API** contracts with full API documentation, and connected with third-party data services to automate visa recommendations.

Driving License System (DLS) – Full Stack Web Application

Developed a full-lifecycle digital licensing platform handling application processing, CNIC verification, appointment scheduling, and status tracking. Built the backend in **C# / ASP.NET Core** with **SQL Server** persistence, the frontend in **HTML5/CSS3/JavaScript**, and integrated **external verification APIs** for real-time CNIC validation.

Bus Schedule Management System – Microservices (ASP.NET Core, Java)

Implemented a microservices-based schedule management platform in **ASP.NET Core** and **Java** with an API Gateway. Designed **SQL Server** schemas, applied **NoSQL (Firebase)** for real-time schedule updates, and maintained full API specifications and technical documentation across all services.

Achievements

- Owned full SDLC delivery for **multiple production-grade enterprise applications**, collaborating across product, design, and QA functions in Agile environments.
- Designed and optimized **SQL Server** and **NoSQL (Firestore)** database schemas, significantly reducing query execution time and improving API throughput.
- Built and maintained **RESTful API integrations** with third-party services, including secure authentication via **Azure Entra ID**, improving system security and interoperability.
- Diagnosed and resolved **complex systemic bugs** across the full stack, applying structured root-cause analysis to deliver lasting fixes.
- Conducted **code reviews** and mentored junior developers, driving consistent code quality and adherence to team standards.
- Delivered scalable, cloud-hosted applications on **Microsoft Azure** with CI/CD deployment pipelines, improving release reliability.
- Maintained comprehensive **API documentation and technical specifications** across all projects, enabling smooth onboarding and cross-team collaboration.
